

KELAMIX COMPLEX

FERTILIZER

Kelamix COMPLEX is a chelled, water soluble fertilizer, designed to prevent and correct the iron, manganese, zinc, copper, boron and molybdenum lack in all kinds of farming in a fast and long lasting way. Due to its composition, **Kelamix COMPLEX** is specially indicated for intensive farming, where it must be dissolved in water through any kind of irrigation system.

Kelamix COMPLEX is an ideal product to complement out-of-soil nutrient solutions.

dose and application method

Prevents and corrects micronutrients lacks of all kinds of farming:

- Horticultural and ornamental: continuous applications, 1kg/ha week and 2 g/100 l
Hydroponic farming: continuous applications, 3-5 g/100 l
- Growing substrates: apply in one dose 200-300 g/m³

These are the recommended doses, but can be changed according to environmental and technical conditions.

Use only in case of known need.
Do not apply doses higher than recommended ones.

content

Solid micronutrients mixture: Boron (B), copper (Cu), iron (Fe), Manganese (Mn), Molybdenum (Mo) and Zinc (Zn).

Chelling agent EDTA.
pH range in which a good chelled fraction is ensured: 3.5-6.5

CONTENT:

Boron (B) total	0.63%
Water soluble	0.63%
Copper (Cu) total	0.29%
Water soluble	0.29%
Chelled fraction	100%
Chelled by EDTA	0.29%
Iron(Fe) total	7.8%
Water soluble	7.8%
Chelled fraction	100%
Chelled by EDTA	7.8%
Manganese(Mn) total	3.75%
Water soluble	3.75%
Chelled fraction	100%
Chelled by EDTA	3.75%
Molybdenum (Mo) total	0.21%
Water soluble	0.21%
Zinc (Zn) total	0.58%
Water soluble	100%
Chelled fraction	0.58%
Chelled by EDTA	0.58%

Keep hidden from Light, in a dry place and inside its original parking.

Keep away from food and drinks.

The exposure to sunlight might degrade the product.

Keep out of children reach.

In case of contact with the eyes, wash immediately with water.

Wash the hands carefully alter using the product.
