

KELAMIX EDTA 13%

FERTILIZER

Kelamix EDTA 13% is a quelled, water soluble fertilizer, designed to prevent and correct the iron lack in all kinds of farming in a fast and long lasting way. Due to its composition, **Kelamix EDTA 13%** is specially indicated for intensive farming, where it must be dissolved in water through any kind of irrigation system.

Kelamix EDTA 13% is an ideal product to complement out-of-soil nutrient solutions.

dose and application method

Prevents and corrects micronutrients lacks of all kinds of farming:

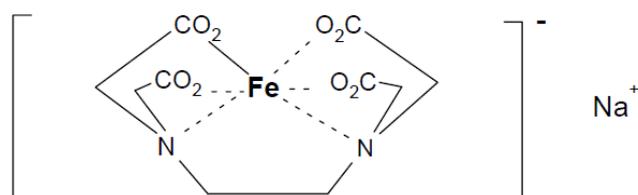

- Horticultural and ornamental: continuous applications, 1kg/ha week and 2 g/100 l
Hydroponic farming: continuous applications, 3-5 g/100 l
- Growing substrates: apply in one dose 200-300 g/m³

These are the recommended doses, but can be changed according to environmental and technical conditions.

Use only in case of known need.
Do not apply doses higher than recommended ones.

content

EDTA-FeNa·3H₂O
Recomended pH: 1.5-6.5

CONTENT:

Total Iron (Fe)	13,1%
Soluble Iron (Fe)	13,1%
Quelled fraction:	100%
Quelled Iron (Fe).....	13,1%
